Map of Ontario Census Divisions

I. Introduction

This report presents updated population projections for Ontario and each of its 49 census divisions, by age and sex, from the new base year of 2010 to 2036. These projections are produced by the Ontario Ministry of Finance and are an update of the projections released in spring 2010, based on the 2006 Census.

The Ministry of Finance produces an updated set of population projections every year to provide planners and researchers with a demographic outlook reflecting the most up-to-date trends and historical data. This update is based on the new 2010 population estimates from Statistics Canada and includes minor changes to reflect the most recent trends in fertility, mortality and migration.

The updated projections have three scenarios for Ontario. The medium, or reference scenario, is considered most likely to occur. The low- and high-growth scenarios provide a reasonable forecast range based on plausible changes in the components of growth. Projections for each of the 49 census divisions are for the reference scenario only.

The projections do not represent Ontario government policy targets or desired population outcomes, nor do they incorporate explicit economic or planning assumptions. They are developed using a standard demographic methodology in which assumptions for population growth reflect recent trends in all streams of migration and the continuing evolution of long-term fertility and mortality patterns in each census division. Census division projections are summed to obtain the Ontario total.

The report includes a set of detailed statistical tables on the new projections. Key demographic terms are defined in a glossary.

II. Highlights

Highlights of the new 2010-2036 projections are for the reference scenario:

- Ontario's population is projected to experience healthy growth over the next 26 years, rising 34.4 per cent, or over 4.5 million, from an estimated 13.2 million on July 1, 2010 to 17.7 million by July 1, 2036.
- The annual rate of growth of Ontario's population is projected to slow gradually over the projection period, starting at 1.2 per cent in 2010-11 and moderating to 1.0 per cent by 2035-36.
- Net migration is projected to account for 68 per cent of all population growth in the
 province over the 2010–2036 period, with natural increase accounting for the remaining
 32 per cent. Over the last decade of the projections, the contribution of natural increase will
 moderate as baby boomers reach senior years and the number of deaths increases more
 rapidly.
- The number of seniors aged 65 and over is projected to more than double from 1.8 million, or 13.9 per cent of population, in 2010 to 4.1 million, or 23.4 per cent, by 2036. The growth in the share and number of seniors will accelerate over the 2011–2031 period as baby boomers begin to turn age 65. After 2031, the growth in seniors will slow significantly.
- Over the next five years, the number of children aged 0–14 will be relatively stable around 2.2 million, before rising more rapidly to almost 2.9 million by 2036. The children's share of population is projected to fall from 16.7 per cent in 2010 to 16.2 per cent in 2015, and to rise slightly over the 2015–2027 period to reach 16.7 per cent as the baby boom echo generation (children of baby boomers) have children. Thereafter, the share is projected to resume declining, falling to 16.1 per cent by 2036.
- The number of Ontarians aged 15–64 is projected to grow from 9.2 million in 2010 to 10.7 million by 2036. This age group is projected to decline as a share of total population, falling from 69.4 per cent in 2010 to 60.5 per cent by 2036. As baby boomers turn age 65, the growth in population aged 15-64 will slow down until 2027–28 and then accelerate over the remainder of the projection.
- The Greater Toronto Area (GTA) is projected to be the fastest growing region of the
 province, with its population increasing by 3.0 million, or 47.7 per cent, to 2036. The GTA's
 share of provincial population is projected to rise from 47.1 per cent in 2010 to 51.8 per cent
 in 2036.
- The other regions of the province will grow more slowly than the GTA and are projected to see their shares of provincial population decline gradually. The Northwest region is projected to experience a small population decline.

III. Projection Results

Reference, low and high-growth scenarios

The Ministry of Finance projections provide three plausible growth scenarios for the population of Ontario to 2036. The medium-growth or reference scenario is considered most likely to occur. The low- and high-growth scenarios provide a forecast range based on plausible changes in the components of growth. Population is projected for each of the 49 census divisions for the reference scenario only. Charts and tables in this report are for the reference scenario, unless otherwise stated.

Under all three scenarios, Ontario's population is projected to experience healthy growth over the 2010–2036 period. In the reference scenario, population is projected to grow 34.4 per cent, or over 4.5 million, over the next 26 years, from an estimated 13.2 million on July 1, 2010 to 17.7 million on July 1, 2036.

In the low-growth scenario, population increases 17.8 per cent, or 2.3 million, to reach almost 15.6 million people by 2036. In the high-growth scenario, population grows 52.1 per cent, or 6.9 million, to 20.1 million people by the end of the projection period.

Chart 1
Ontario population, 1971 to 2036

The annual rate of growth of Ontario's population in the reference scenario is projected to slow gradually over the projection period, starting at 1.2 per cent in 2010-11 and moderating to 1.0 per cent by 2035-36.

In the low-growth scenario, the annual population growth rate also declines gradually over the projection period, from 1.0 per cent in 2010-11 to 0.4 per cent by 2035–36. In the high-growth

scenario, the annual rate of population growth increases from 1.5 per cent in 2010–11 to 1.7 per cent in 2022–23, and declines slightly thereafter to 1.6 per cent by the end of the projection period.

Chart 2

Annual rate of population growth in Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

The components of Ontario population change

In any given year, the contributions of natural increase and net migration to population growth vary. While natural increase trends evolve slowly, net migration can be more variable, mostly due to swings in interprovincial migration and variations in immigration. For example, over the past 10 years, the share of population growth coming from net migration has been as high as 78 per cent in 2000–01 and as low as 61 per cent in 2006–07.

Net migration levels to Ontario have been lower than usual in recent years, at less than 100,000 per year, mostly due to net interprovincial migration losses to the rest of Canada. Natural increase has also been trending lower, since baby boomers have nearly completed their reproductive years and the cohorts of women in peak fertility years are now smaller. The number of births and deaths has been rising slowly and at a similar pace. As a result, natural increase has been fairly stable at about 50,000 annually over the last decade.

Over the next three years, net migration is projected to increase as net interprovincial migration losses gradually subside. Ontario's net migration gain is projected to rise from 106,900 to 109,500 during the first three years of the projection. Over the rest of the projection period, net migration rates are projected to be stable. Consequently, net migration levels will increase at the same pace as overall population growth, to reach 135,000 by 2035–36. The share of population growth accounted

for by net migration is projected to remain fairly stable at about 65 per cent until the mid 2020s, increasing rapidly thereafter to reach 77 per cent by 2036 as a result of lower natural increase.

Chart 3
Contribution of natural increase & net migration to Ontario's population growth, 1971–2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

Future levels of natural increase will be affected by two main factors over the projection period. First will be the passage of the baby boom echo generation (children of baby boomers) through peak fertility years, which will result in an increase in the number of births through the late 2010s and early 2020s. Births are projected to increase from 144,000 in 2010–11 to over 175,000 by the mid 2020s and remain above that level until the end of the projection period.

The second major factor influencing the future path of natural increase in Ontario will be the arrival of large cohorts of baby boomers in the senior age group. By 2031, all baby boomers will be 65 or older and the number of deaths will start to increase more rapidly. Over the first decade of the projections, the pace of increase in the annual number of deaths in Ontario is projected to slow as the small cohorts born during the 1930s reach their life expectancy. From 2010 to 2020, the annual number of deaths will still rise from 91,000 to 105,000. Over the remaining years to 2036, annual deaths will increase faster, to reach almost 139,000.

Overall, natural increase is projected to increase from 53,000 in 2010–11 to a high of 64,000 in 2021–22, followed by a gradual decline to 40,000 by 2035–36. The share of population growth accounted for by natural increase is projected to remain fairly stable at about 35 per cent until the early 2020s, decreasing rapidly thereafter to reach 23 per cent by 2036.

Age structure

By 2036, there will be more people in every age group in Ontario compared to 2010 and the aging of Ontario's population will accelerate. Baby boomers will have swelled the ranks of seniors; children of the baby boom echo generation will be of school-age; and the baby boom echo cohorts, along with a new generation of immigrants, will have bolstered the population aged 15–64.

Chart 4

Age pyramid of Ontario's population, 2010 and 2036

Sources: Statistics Canada, 2010, and Ontario Ministry of Finance projections.

The median age of Ontario's population is projected to rise from 39 years in 2010 to 43 years in 2036. Median age for women will climb from 40 to 44 years over the projection period while for men it is projected to increase from 39 to 42 years.

The number of seniors aged 65 and over is projected to more than double from 1.8 million, or 13.9 per cent of population in 2010, to 4.1 million, or 23.4 per cent, by 2036. By 2017, for the first time, seniors will account for a larger share of population than children aged 0–14.

By the early 2030s, once all baby boomers have reached age 65, the pace of increase in the number and share of seniors is projected to slow down significantly. The annual growth rate of the senior age group is projected to slow from an average of 3.5 per cent over 2010–31 to less than 1.8 per cent by the end of the projection period. However, this age group will still be growing much faster than the 0–14 and 15–64 age groups.

The older age groups will experience the fastest growth among seniors. The number of people aged 75 and over is projected to rise from 865,000 in 2010 to almost 2.2 million by 2036. The 90+ group will more than triple in size, from 79,000 to 291,000.

The proportion of women among the oldest seniors is projected to remain higher than that of men but to decline slightly as male life expectancy is projected to increase faster than that of females. In 2010, there were 48 per cent more women than men in the 75+ age group. By 2036, the ratio is projected to have fallen to 21 per cent more women than men of that age.

Chart 5
Proportion of population aged 0-14, 15-64 and 65+ in Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

Over the next five years, the number of children aged 0–14 will be relatively stable around 2.2 million, before rising to almost 2.9 million by 2036. The children's share of population is projected to fall from 16.7 per cent in 2010 to 16.2 per cent in 2015, and to rise slightly over the 2015–2027 period to reach 16.7 per cent as the baby boom echo generation (children of baby boomers) have children. Thereafter, the share of children is projected to decline, reaching 16.1 per cent by 2036. By the 2030s, the number of children is projected to grow at a much slower pace than other age groups as smaller cohorts of women pass through their 20s and 30s.

The number of Ontarians aged 15–64 is projected to grow from 9.2 million in 2010 to 10.7 million by 2036, at a slower pace than the 0–14 and 65+ age groups. As a result, the 15–64 age group is projected to account for a decreasing share of total population, falling from a high of 69.4 per cent in 2010 to 60.5 per cent by 2036.

The growth rate of the population aged 15–64 is projected to keep falling over the first two decades of the projection period. From an annual rate of growth of 1.1 per cent at the beginning of the projection, this age group is projected to grow by just 0.4 per cent by the late 2020s. Starting at the end of the 2020s, as the children of the baby boom echo start reaching age 15, the pace of annual growth of the 15–64 age group is projected to rise again to 0.9 per cent by 2035–36.

Chart 6
Pace of growth of population age groups 0–14, 15–64 and 65+ in Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

Within the 15–64 age group, the number of youth aged 15–24 is projected to decline slightly over the 2010s, from a high of 1,818,000 in 2012 to a low of 1,721,000 by 2021. The youth population is then projected to resume growing, reaching over 2 million by 2036. The youth share of total population is initially projected to decline from 13.7 per cent in 2010 to 11.1 per cent by 2026, followed by a small rise to 11.5 per cent by 2036.

The number of people aged 25–44 is projected to increase throughout the projection period from 3.7 million in 2010 to almost 4.4 million by 2036 while their share of population will decline from 27.8 to 25.0 per cent. The number of people aged 45–64 is projected to keep growing in the short term from 3.7 million in 2010 to around 4 million by the late 2010s and remain at that level until 2030. The 45-64 age group will resume growth during the 2030s to reach almost 4.3 million by 2036. Its share of population is projected to decline gradually from a high of 27.9 per cent in the early 2010s to 24.0 per cent by 2036.

Regional components of population change

Within Ontario, the main demographic determinants of regional population growth are the current age structure of the population, natural increase, and the migratory movements in and out of each region. Demographic trends vary significantly among the 49 census divisions that comprise the six geographical regions of Ontario.

The current regional age structure has a direct impact on projected births and deaths. A region with a higher share of its current population in older age groups will likely experience more deaths in the future than a region of comparable size with a younger population. Similarly, a region with a large share of young adults in its population is expected to see more births than a region of comparable size with an older age structure. Also, since migration rates vary by age, the age structure of a region or census division will have an impact on the migration of its population.

The general aging of population will result in a rising number of census divisions with negative natural increase over the projection period. Natural increase was negative in 24 of Ontario's 49 census divisions over the past five years. This number is projected to rise gradually so that 34 census divisions are projected to experience negative natural increase by 2035–36.

This declining or negative trend in natural increase means that many census divisions in Ontario where natural increase previously was the main or even sole contributor to population growth have already started to see their population growth slow. This trend is projected to continue as the population ages further.

Chart 7
Evolution of natural increase by census division, 2010–2036

Source: Ontario Ministry of Finance projections.

Migration is the most important determinant of population growth for Ontario as a whole and for most regions. Net migration gains, whether from international sources, other parts of Canada or other regions of Ontario, are projected to continue to be the major source of population growth for almost all census divisions.

Large urban areas, especially the GTA, which receive most of the international migration to Ontario are projected to grow strongly. For other regions such as Central Ontario, the continuation of migration gains from other parts of the province will be a key source of growth. Some census divisions of Northern Ontario receive only a small share of international migration and have been experiencing net out-migration, mostly among youth, which reduces both current and future population growth.

Regional population growth

The GTA is projected to be the fastest growing region of the province over the projection period, accounting for almost two-thirds of Ontario's net population growth to 2036. The GTA's population is projected to increase from 6.2 million in 2010 to 9.2 million in 2036. The region's share of total Ontario population is projected to rise from 47.1 per cent in 2010 to 51.8 per cent in 2036. It passes the 50 per cent mark in 2026.

Chart 8

Population of Ontario regions, 2010 and 2036

Within the GTA, Toronto's population is projected to rise from 2.72 million in 2010 to 3.36 million in 2036, an increase of 23.7 per cent, below the provincial growth rate of 34.4 per cent. Growth in the other census divisions of the GTA (Durham, Halton, Peel and York) will be significantly faster than the Ontario average, with the addition of over 2.3 million people to the suburban GTA. Peel

alone is projected to see its population increase by 850,000 over 2010–36. Halton is projected to be the fastest-growing census division in Ontario over the projection period, with growth of 86.9 per cent to 2036.

Chart 9

Population growth/decline by census division over 2010–2036

Source: Ontario Ministry of Finance projections.

The population of Central Ontario is projected to grow by 863,000 or 30.2 per cent, from 2.86 million in 2010 to 3.72 million in 2036. The region's share of provincial population will decline slightly from 21.6 to 21.0 per cent. Three census divisions surrounding the GTA will continue to experience population growth significantly above the provincial average; they are Simcoe at 47.5 per cent, Waterloo at 45.1 per cent and Dufferin at 39.8 per cent.

The population of Eastern Ontario is projected to grow 27.7 per cent over the projection period, from 1.72 million to 2.20 million. Ottawa is projected to grow fastest (44.5 per cent) from 897,000 in 2010 to almost 1.3 million in 2036. Most other Eastern Ontario census divisions will also grow, but below the provincial average, with Frontenac and Prescott & Russell growing fastest at 25.1 and 17.8 per cent respectively. The census division of Stormont, Dundas and Glengarry is projected to experience population decline over 2010–2036, with population falling 6.900 or 6.0 per cent as both natural increase and net migration trends are negative.

The population of Southwestern Ontario is projected to grow from 1.60 million in 2010 to 1.82 million in 2036, or by 14.0 per cent. Growth rates within Southwestern Ontario will vary, with Middlesex and Elgin growing fastest (32.5 and 21.7 per cent respectively). The population of Huron, Chatham-Kent and Perth are projected to be relatively stable over the 2010–2036 period.

The population of Northern Ontario is projected to be relatively stable over the projection horizon, with a slight increase of 5,900 or 0.7 per cent, from 805,200 in 2010 to 811,200 by 2036. Within the North, the Northeast is projected to see growth of 8,100 or 1.4 per cent, from 564,600 to 572,700. The Northwest is projected to decline by 2,200 people, or 0.9 per cent, from 240,600 to 238,400.

In the past, Northern Ontario's positive natural increase offset part of the losses it experienced through net migration. However, natural increase in the North as a whole is now negative and it is projected to remain so as population aging accelerates.

Table A

Population Shares of Ontario Regions, 1986 to 2036

Share of Ontario Population (%)	1986	1996	2010	2016	2026	2036
GTA	41.4	43.0	47.1	48.5	50.3	51.8
Central	21.8	22.2	21.6	21.4	21.1	21.0
East	14.0	13.8	13.0	12.9	12.7	12.4
Southwest	14.1	13.4	12.1	11.6	10.8	10.2
Northeast	6.2	5.4	4.3	4.0	3.6	3.2
Northwest	2.6	2.3	1.8	1.7	1.5	1.3

Sources: Statistics Canada, 1986-2010, and Ontario Ministry of Finance projections.

Regional age structure

All regions will see a shift to an older age structure. Regions where natural increase and net migration are projected to become or remain negative will see the largest shifts in age structure. The GTA is expected to remain the region with the youngest age structure as a result of strong international migration and positive natural increase. The Northeast will remain the region with the oldest age structure.

In 2010, the share of seniors aged 65 and over in regional population ranged from a low of 12.2 per cent in the GTA to a high of 17.4 per cent in the Northeast. Among census divisions, it ranged from 9.9 per cent in Peel to 25.6 per cent in Haliburton.

By 2036, the share of seniors in regions is projected to range from 20.4 per cent in the GTA to 30.4 per cent in the Northeast. Among census divisions, it is projected to range from 18.5 per cent in Peel to 44.2 per cent in Prince Edward.

Chart 10 Share of seniors in population by census division in 2036

Source: Ontario Ministry of Finance projections.

Even as the share of seniors in census divisions located in and around the suburban GTA is projected to remain lower than the provincial average, the increase in the number of seniors in this area will be the most significant. The number of seniors is projected to triple (growth above 200 per cent) in the three suburban GTA census divisions (York, Peel and Durham). Conversely, the number of seniors will grow most slowly (less than 70 per cent) in Rainy River, Timiskaming and Algoma.

Chart 11

Growth in numbers of seniors by census division, 2010–2036

Source: Ontario Ministry of Finance projections.

The number of children aged 0–14 is projected to increase in all broad regions of Southern Ontario but to continue declining in the North over the projection period. However, by 2036 the share of children in every region is projected to be slightly lower than it is today. In 2010, the highest share of children among regions was in the Northwest and the GTA at 17.2 per cent; the Northeast had the lowest share at 14.9 per cent. By 2036, the Northeast will remain the region with the lowest share of children at 13.5 per cent while the highest share will be found in the GTA at 16.8 per cent.

The suburban GTA census divisions, along with Ottawa, are projected to record the highest growth in number of children aged 0–14 over the 2010–2036 period, with Halton seeing the most growth at 80.8 per cent. Conversely, most rural and northern census divisions are projected to have significantly fewer children by 2036, with the largest declines in the North. However, most census divisions are projected to see only a slight decrease in the share of children in their population. In 2010, the highest share of children was found in Kenora at 22.0 per cent and the lowest share in Haliburton at 10.8 per cent. By 2036, Kenora is projected to still have the highest share of children at 20.7 per cent while Prince Edward will have the lowest at 8.8 per cent.

Chart 12

Growth/decline in numbers of children aged 0-14 by census division, 2010-2036

Source: Ontario Ministry of Finance projections.

The share of population aged 15–64, which ranged from 67.6 per cent in Southwestern Ontario to 70.7 per cent in the GTA in 2010, is projected to decline over the 2010–2036 period in every region. This age group is projected to account for 62.7 per cent of population in the GTA and 55.5 per cent in the Northwest by 2036.

While the share of population aged 15–64 is projected to fall in every census division of the province, the number of people in this age group is projected to increase in 18 of the 49 CDs, mainly in the GTA, Central Ontario and urban areas of the East and the Southwest. The highest share of people aged 15–64 in 2010 was in Ottawa (71.2 per cent) while the lowest was in Haliburton (63.6 per cent). By 2036, the highest shares will be found in GTA census divisions and in both Waterloo and Ottawa, with Toronto at the highest (64.0 per cent). Prince Edward, Haliburton, Parry Sound and Northumberland are projected to become the only four CDs with shares of people aged 15–64 below 50 per cent by the end of the projection period.

IV. Methodology and Assumptions

Projections methodology

The methodology used in Ministry of Finance long-term population projections is the cohort-component method, essentially a demographic accounting system. The calculation starts with the base-year population (2010) distributed by age and sex.

A separate analysis and projection of each component of population growth is made for each year, starting with births. Then, projections of deaths and the five migration components (immigration, net emigration, net change in non-permanent residents, interprovincial in- and out-migration, and intraprovincial in- and out-migration) are also generated and added to the population cohorts to obtain the population of the subsequent year, by age and sex.

This methodology is followed for each of the 49 census divisions. The Ontario-level population is obtained by summing the projected census division populations.

It should be noted that the population projections are demographic, founded on assumptions about births, deaths and migration over the projection period. Assumptions are based on the analysis of the long-term and the most recent trends of these components, as well as expectations of future direction. For Ontario, the degree of uncertainty inherent in projections is represented by the range between the low- and high-growth scenarios, with the reference scenario representing the most likely outcome.

Base population

The updated projections presented in this report use Statistics Canada's preliminary July 1, 2010 postcensal population estimates as a base.

As well as providing a new starting point for total population by age and sex, updating the projections to a new base alters the projected age structure and population growth in each census division. It also has an impact on many components of population growth that are projected by using age-specific rates, such as births, deaths and several of the migration streams.

Fertility

The projected number of births for any given year is obtained by applying age-specific fertility rates to cohorts of women in the reproductive age group, ages 15 to 49. The projection model relies on four parameters¹ to generate the annual number of births. The first of these parameters, the total fertility rate (TFR), reflects the level of fertility while the other three parameters (the mean age at maternity, the skewness and the variance of the distribution) reflect the timing, or age, at which

¹ Based on the Pearsonian approach. See Glossary.

women have their babies. All parameters used are calibrated to generate age-specific fertility rates that closely follow recent trends.

Assumptions are based on a careful analysis of past age-specific fertility trends in Ontario and a review of fertility trends elsewhere in Canada and in other countries. The general trend is that many women are postponing births to their 30s and early 40s.

The decline in the fertility rate among young women is accompanied by a rise in fertility rates among older women. Over the past 20 years, teenage girls and women in their early 20s have experienced the sharpest declines in fertility rates. Women in their late 20s and early 30s have had declining fertility rates over the late 1990s and early 2000s but recent data point toward a stabilization.

Fertility rates of women in their mid-30s and older were rising moderately up to about 2000, but over the most recent years the pace of increase in fertility rates for this group has accelerated. These are the same cohorts of women who postponed births during their 20s and are now having children in their 30s.

Following about half a century of almost continuous decline, the total fertility rate in Ontario reached its lowest level ever recorded in 2002, at 1.48 children per woman. Since then, annual TFR values have increased gradually, back up to 1.58 in 2008 (latest available). This is less than half the TFR level seen at the 1960 peak of the Baby Boom when Ontario's total fertility rate reached 3.8 children per woman with a record 159,000 births registered that year. By 1972, fertility fell below the replacement level of 2.1 children per woman.

Most researchers agree that fertility rates in the future are unlikely to return to the highs observed in the 1950s and early 1960s. Rather, it is believed that fluctuations of small amplitude around values below the replacement level and within a fairly narrow range are more likely.

In the reference scenario, the TFR is assumed to increase slightly from 1.59 to 1.66 children per woman by 2025 as younger women's fertility rates stabilize and those of older women steadily increase.

In the low-growth scenario, fertility is assumed to decline gradually until the TFR reaches 1.36 children per woman at the end of the projection period. In the high-growth scenario, the TFR increases gradually to 1.96 children per woman by the end of the period.

Fertility assumptions at the census division level

The most recent data at the census division level (2007) shows that TFRs range from a high of 2.29 in Kenora to a low of 1.25 in Haliburton. Trends in the evolution of the TFR in each census division over the past fifteen years show no convergence of TFRs by census division. For this reason, the projected parameters for fertility at the census division level are modelled to maintain the regional differences in women's fertility behaviour. The census division-to-province ratio for mean age at fertility in the most recent period is assumed to remain constant. The variance and skewness of fertility distributions at the census division level evolve over the projection period following the same absolute changes as these parameters at the Ontario level.

Chart 13

Total fertility rate of Ontario women, 1979 to 2036

Sources: Statistics Canada, 1979-2008, and Ontario Ministry of Finance projections.

Mortality

The projected number of deaths each year is obtained by applying age-specific mortality rates to population cohorts in corresponding ages. Assumptions of future age-specific death rates are derived² from trends observed over the 1971–2008 period related to the pace of improvement in overall life expectancy and the age patterns in mortality.

For low-and high-growth scenarios, assumptions of life expectancy at birth at the end of the projection period are first developed. For intervening years, life expectancy is assumed to increase linearly. The derived set of assumptions for the three scenarios for Ontario all reflect a continuation of the gains recorded in the average duration of life.

The province of Ontario has one of the highest levels of life expectancy in both Canada and among the countries of the developed world. A newborn female in Ontario can expect to live 83.1 years and a newborn male 78.8 years (2006 data). Since the late 1970s, average gains in life expectancy have been in the order of 0.14 year per annum for females and 0.25 year per annum for males.

Up to the mid-1990s, annual gains in life expectancy were getting somewhat smaller and it was expected that future improvements would continue at this slowing pace. However, over the past decade, annual gains in life expectancy have picked up and appear to grow following a more linear

² Following the Lee-Carter model.

trajectory. Future gains in life expectancy are projected to be concentrated at older ages and to be smaller for infants.

In the reference scenario, life expectancy in Ontario is projected to continue increasing linearly over the first decade of the projection and then to start slowing gradually. By 2036, life expectancy is projected to reach 85.3 years for males and 87.8 years for females. This means total gains of 6.5 years for males and 4.7 years for females between 2006 and 2036.

In the low-growth scenario, life expectancy increases at a slower pace, to 83.8 and 86.6 years for males and females respectively. In the high-growth scenario, life expectancy reaches 86.8 and 89.0 years for males and females respectively.

Chart 14 Life expectancy at birth by sex in Ontario, 1979 to 2036

Sources: Statistics Canada, 1979-2006, and Ontario Ministry of Finance projections.

Under the assumptions on mortality for each of the three scenarios, male life expectancy is expected to progress at a faster pace than female life expectancy. This is consistent with recent trends where males have recorded larger gains than females. Thus, the overall gap between males and females has gradually decreased, and is projected to continue to do so.

Table B

Life Expectancy in Ontario, 1976 to 2036

		1976	1986	1996	2006	2016	2026	2036
Male At birth At age 65	70.8	73.7	75.9	78.8	81.2	83.3	85.3	
	At age 65	13.9	15.0	16.1	18.4	19.5	20.9	22.4
Female	At birth	78.0	80.0	81.3	83.1	84.8	86.3	87.8
	At age 65	18.2	19.1	19.9	21.3	22.1	23.2	24.3

Sources: Statistics Canada, 1976-2006, and Ontario Ministry of Finance projections.

Mortality assumptions at the census division level

At the census division level, the mortality assumptions were developed using a ratio methodology. The Ontario-level mortality structure was applied to each census division's age structure over the most recent three years of comparable data and the expected number of deaths was computed. This was then compared to the actual annual number of deaths for each census division over this period to create ratios of actual to expected number of deaths. These ratios were then multiplied by provincial age-specific death rates to create death rates for each census division. These were then applied to the corresponding census division population to derive the number of deaths for each census division.

An analysis of the ratio of actual to expected deaths for each census division did not reveal a consistent pattern or movement toward a convergence or divergence among regions over time. For this reason, the recent three-year average ratio for each census division was held constant over the projection period.

Components of net migration

The following sections discuss assumptions and methodology for the components of net migration, including immigration, emigration, non-permanent residents, interprovincial migration and intraprovincial migration.

Immigration

Immigration levels in Canada are determined by federal government policy. Each year, the federal Minister of Citizenship and Immigration announces the target range for the level of immigration to be achieved in the coming year. For calendar year 2011, the national target range is 240,000 to 265,000 immigrants.

Over the past 20 years, the target range has been increased gradually by successive federal governments. These increases to the immigration target have helped maintain a relatively stable immigration rate to Canada of about 0.75 per cent of population each year.

In Ontario, immigration as a share of population has been higher than for Canada as a whole. Over the past 20 years, the immigration rate to Ontario has averaged 1.05 per cent of population, with 13 of the past 20 years above the one per cent mark.

In the reference scenario, the assumed immigration rate is set at 0.9 per cent. This long-term immigration rate of 0.9 per cent is reached over a five-year transition period to reflect the lower rates observed in recent years.

Chart 15
Rate of immigration to Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

By maintaining constant long-term immigration rates to Ontario over the projection period, the number of immigrants increases over time as population grows. In the reference scenario, the annual immigration level is projected to increase steadily over the first five years, from 117,000 in 2010–11 to 125,000 by 2014–15 to reach the long-term immigration rate assumption of 0.9 per cent of population. Over the rest of the projection period, the level of immigration is projected to increase gradually, in tandem with overall population growth, reaching 158,000 by 2035–36.

The long-term immigration rate is set at 0.7 per cent in the low-growth scenario, resulting in immigration levels rising slowly, from 96,000 in 2014–15 to 109,000 by 2035–36. In the high-growth scenario, the long-term rate of immigration is set at 1.1 per cent, resulting in immigration levels rising rapidly, from 155,000 in 2014–15 to 218,000 by 2035–36.

Immigration assumptions at the census division level

Projected immigration shares for each census division are based on the trends observed in the distribution of immigrants by census division over the recent past. These shares evolve throughout the projection period following established trends. The average age-sex distribution pattern for

immigrants observed over the past five years is assumed to remain constant over the entire projection period. Over 85 per cent of immigrants coming to Ontario are aged 0–44.

Chart 16
Immigration to Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

Emigration

Total emigration is a measure of net emigration, that is gross international emigration flow minus returning emigrants plus the net variation in the number of Ontarians temporarily abroad. The level of total emigration from Ontario averaged 22,000 over the past three years.

The number of emigrants is difficult to estimate with a high degree of accuracy because of incomplete information. Statistics Canada publishes annual estimates of these flows based on a variety of sources, such as administrative data files and immigration statistics published by agencies of other countries.

In the reference scenario, the average emigration rates by age and sex for each census division observed over the past five years are used to model the projected number of people emigrating annually from each census division. The modelling is dynamic, taking into account the annual changes in age structure within census divisions. For Ontario as a whole, this results in the number of emigrants increasing gradually over the projection period, from 22,200 in 2010–11 to 28,300 by 2035–36.

In the low-growth scenario, emigration rates by age and sex used in the reference scenario are increased by 30 per cent, making them 130 per cent of recently-observed rates. This results in emigration levels rising from 29,300 to 32,600 over the projection period.

In the high-growth scenario, emigration rates by age and sex used in the reference scenario are lowered by 30 per cent, making them in effect equivalent to 70 per cent of recently-observed rates. This results in the number of emigrants rising from 15,100 to 21,900 over the projection period.

Chart 17
Emigration from Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections

Emigration assumptions at the census division level

The projected number of people, by age and gender, emigrating from each census division for each year of the projections is modelled using the average emigration rates by age and gender for each census division observed over the past five years.

Non-permanent residents

Statistics Canada estimates that there were about 239,000 non-permanent residents (NPRs) living in Ontario in 2010 (e.g., foreign students, temporary workers, refugee claimants). These foreign residents are included in the base population as they are counted in the Census.

The year-to-year change in their total number must be accounted for as a component of population growth. Determining assumptions for this component is a complex task because of the significant year-to-year fluctuations and the transient nature of this group.

Over the past 30 years, Ontario has gained on average 5,900 non-permanent residents annually. The reference scenario reflects long-terms trends in the annual change in the number of NPRs by setting the long-term yearly gain to 5,000. In the low- and high-growth scenarios, the long-term annual change in the stock of NPRs is set at zero and 10,000 respectively.

Chart 18

Annual change in the number of non-permanent residents living in Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

Non-permanent resident assumptions at the census division level

Projected shares of non-permanent residents for each census division are based on the share held by each census division in 2010. The age-sex distribution of non-permanent residents is based on the average of the last five years. The distribution pattern is assumed to remain constant over the projection period.

Interprovincial migration

Interprovincial migration is a component that fluctuates significantly from year to year. Although Ontario remains a major province of attraction for migrants from other provinces, trend analysis of the last three decades reveals a mixed pattern of several years of gains followed by several years of losses. This pattern is usually closely tied to economic cycles.

Since 2003, net interprovincial migration to Ontario has been negative, largely due to net losses to Alberta. Over the past 30 years, net interprovincial migration to Ontario averaged 3,300 per year. However, this includes the abnormally large inflows from Quebec recorded in the years following the 1980 referendum. Excluding the extra inflows during this period, long-term net interprovincial migration to Ontario would be closer to zero. This is reflected in the most recent positive and negative cycles, which have been of similar magnitude of gains and losses.

In the reference scenario, annual net interprovincial migration for Ontario reflects recent trends in the short term. It is set at -5,000 for 2010–11, gradually returning to long-term historical values by 2012–13 with a net of zero and then remaining at that level for the rest of the projection period.

Chart 19 Net interprovincial migration in Ontario, 1971 to 2036

Sources: Statistics Canada, 1971-2010, and Ontario Ministry of Finance projections.

In the low-growth scenario, net interprovincial migration for Ontario is assumed to improve gradually from a loss of 10,000 people in 2010–11 to a loss of 5,000 from 2012-13 onwards. In the high-growth scenario, a net annual gain of 5,000 people is assumed for the entire projection period.

The annual in-flows corresponding to the long-term net migration levels in the low-growth, reference and high-growth scenarios are 62,500, 65,000 and 67,500 respectively. The corresponding annual out-flows are 67,500, 65,000 and 62,500.

Interprovincial migration assumptions at the census division level

Each census division's share of Ontario inflow and outflow of interprovincial migrants over the last five years is applied to projected flows for the province and held constant throughout the projection period.

Intraprovincial migration

At the census division level, intraprovincial migration, or the movement of population from a census division to another one within the province, is a significant component of population growth. This component affects population growth only at the census division level.

The annual number of intraprovincial migrants in Ontario has fluctuated within the 350,000 to 430,000 range over the past 20 years. Over the projection period, the annual number of intraprovincial migrants increases gradually from 372,000 in 2010–11 to 484,000 in 2035–36. This increase over time reflects population growth and age structure changes at the census division level. In fact, even as the number of intraprovincial migrants is projected to increase, the resulting rate of intraprovincial migration in Ontario will decline slightly over the projection period.

Intraprovincial migration assumptions at the census division level

The projected number of people, by age, leaving each census division for each year of the projections, as well as their destination within the province, is modelled using the origin-destination migration rates by age for each census division over the past five years. Because migration rates by age group are different for each census division and because different age groups have different origin-destination behaviours, the methodology provides a powerful tool to project movers based on observed age and origin-destination migration patterns. The modelling is dynamic, taking into account the annual changes in age structure within census divisions.

The evolution of intraprovincial migration patterns in each census division was studied to identify specific trends and the intraprovincial migration rate assumptions were adjusted to account for these trends.

Glossary

Baby boom generation

People born during the period following World War II, 1946 to 1965, marked by an significant increase in fertility rates and in the number of births.

Baby boom echo generation

People born during the period 1982 to 1996. Children of baby boomers.

Cohort

Represents a group of persons who have experienced a specific demographic event during a given period, which can be a year. For example, the birth cohort of 1966 consists of the number of persons who were born in 1966.

GTA

The Greater Toronto Area, comprised of the census divisions of Toronto, Durham, Halton, Peel and York.

International migration

Movement of population between Ontario and a foreign country. International migration includes immigrants, emigrants and non-permanent residents. Net international migration is the difference between the number of people entering and the number of people leaving the province from foreign countries.

Interprovincial migration

Movement of population between Ontario and the rest of Canada. Net interprovincial migration is the difference between the number of people entering Ontario from the rest of Canada and the number of people leaving Ontario for elsewhere in Canada.

Intraprovincial migration

Movement of population between the 49 census divisions within Ontario. Net intraprovincial migration for a given census division is the difference between the number of people moving from the rest of Ontario to this census division and the number of people leaving for elsewhere in the province.

Lee-Carter method

A method of mortality projection proposed by Lee and Carter used to generate annual agesex specific mortality rates. See Lee, Ronald D., and Carter, Lawrence, 1992. "Modeling and Forecasting the Time Series of U.S. Mortality," Journal of the American Statistical Association 87, no 419 (September):659-71.

Life expectancy

A statistical measure derived from the average number of years of life remaining for a person at a specific age if that person would experience during his/her life the age-specific mortality rates observed in a given year.

Median age

The median age is the age at which exactly one half of the population is older and the other half is younger. This measure is often used to compare age structures between jurisdictions.

Natural increase

The number of births minus the number of deaths.

Net migration

Difference between the number of people entering and the number of people leaving a given area. This includes all the migration components included in net international migration, net interprovincial migration and net intraprovincial migration (for sub-provincial jurisdictions).

Net undercoverage

Difference between the number of people not counted in the Census who intended to be enumerated and the number of people counted who should not have been enumerated or were counted more than once. This is a measure by which Statistics Canada adjusts the Census counts to produce population estimates.

Non-permanent residents

Foreign citizens living in Ontario (e.g., foreign students, temporary workers or refugee claimants).

Pearsonian curve

Parametric model used to distribute estimated fertility rates by age of mothers. The Pearsonian curve has four parameters. The first of these parameters, the total fertility rate, reflects the level of fertility while the other three parameters (the mean age at fertility, the skewness and the variance of the distribution) reflect the timing, or age, at which women have their babies.

Population aging

In demographic terms, population aging refers to an increasing share of seniors (ages 65+) in the population.

Population estimates

Measures historical resident population using data from the most recent Census, in addition to administrative data on the components of demographic change (births, deaths and net migration) since the Census.

Total fertility rate

The sum of age-specific fertility rates during a given year. Indicates the average number of children that a generation of women would have if, over the course of their reproductive life, they had fertility rates identical to those of the year considered.

Notes:

1. Population and age structure are for the beginning of the Census year, i.e., July 1.

2. The dependency ratios of those aged 0-19 and those aged 65+ are to the population aged 20-64.

The total dependency ratio is the ratio of both these age groups to the population aged 20-64.

3. Figures may not add to totals due to rounding.

Table 3
Ontario population and selected characteristics, 2001–2036

Notes: 1. Population age structure is for the beginning of each Census year, i.e., July 1.

^{2.} For 2010-11, population and age structure are Statistics Canada estimates for July 1, 2010.

^{3.} Figures may not add to totals due to rounding.

Table 9
Ontario population by age, 2010–2036 – Reference scenario
